HU IT HUB WEBSITE SUMMARY

GO To Website: https://hu-it-hub.netlify.app

Purpose & Audience

- **Audience**: Designed for both students and staff at HU, offering a centralized resource for IT-related updates, events, news, and contact support.

Pages Overview

1. **Home**
    - The welcome landing page features key services, quick-access links to other sections, and a clear value statement tailored for students and staff.
2. **News**
    - Dynamic feed displaying IT announcements, system updates, reminders, and recent blog-style posts to keep everyone informed.
3. **Events**
    - Calendar or list layout showcasing upcoming workshops, training sessions, webinars, campus IT events and. registration links.
4. **About**
    - Provides background on the site's mission, the HU IT department, scope of services offered, and possibly profiles.
5. **Contact**
    - Offers various support channels including an embedded contact form, email addresses, phone numbers, and possibly a link to a support ticket system or helpdesk.

Deployment & Tech

- Built using modern languages (e.g. Html, CSS and JavaScript).

- Hosted and continuously deployed through **Netlify**, leveraging features like Git-based deployment, GitHub repo(https://github.com/Beneyam-y0s/check---Copy.git).

Why It Works

- **Clear navigation** with five focused pages makes it easy for users to find what they need—whether it's reading updates, learning about events, or reaching IT support.
- **Targeted content** ensures relevance to both students and staff, reducing noise and improving engagement.
- **Reliable performance** thanks to Netlify's hosting environment ensures fast load times, seamless updates, and secure delivery.

Possible Enhancements

- **News & Events** could benefit from richer media (images, easy tagging) and event calendars with registration options.
- **Analytics setup** (Netlify has built-in options) could provide insights on which pages are most visited.
- **User experience improvements**, like a search bar or FAQs, would add even more value, especially for technical support requests.
